

### **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

1. (canceled)
2. (previously presented) The method of claim 55 wherein the mammal is human.
3. (canceled)
4. (previously presented) The method of claim 55 wherein the anti-ErbB2 antibody is a growth inhibitory antibody effective to inhibit the growth of SK-BR-3 breast tumor cells *in vitro*.
5. (currently amended) The method of claim 55 wherein the anti-ErbB2 antibody induces cell death when applied at an effective concentration *in vitro* to cells selected from the group of cells consisting of SK-BR-3, BT474, Calu 3, MDA-MB-453, MDA-MB-361 and SKOV3 cells.
6. (currently amended) The method of claim 55 wherein the anti-ErbB2 antibody induces apoptosis when applied at an effective concentration *in vitro* to cells selected from the group of cells consisting of SK-BR-3, BT474, Calu 3, MDA-MB-453, MDA-MB-361 and SKOV3 cells.
7. (canceled)
8. (previously presented) The method of claim 55 wherein the tumor is cancer.
9. (original) The method of claim 8 wherein the cancer is selected from the group consisting of breast, ovarian, stomach, endometrial, salivary gland, lung, kidney, colon, colorectal, thyroid, pancreatic, prostate and bladder cancer.

10. (original) The method of claim 9 wherein the cancer is breast cancer.
11. (original) The method of claim 10 wherein the breast cancer overexpresses ErbB2 at a 2+ level or more.
12. (original) The method of claim 11 wherein the breast cancer overexpresses ErbB2 at a 3+ level.
13. (original) The method of claim 12 wherein the breast cancer is a metastatic breast cancer.
14. (currently amended) The method of claim 12 wherein the antibody has a biological characteristic of a 4D5 monoclonal antibody (ATCC CRL 10463) such that the antibody shows a growth inhibitory effect on ~~ErbB2-overexpressing cells selected from the group of cells consisting of SK-BR-3, BT474, Calu 3, MDA-MB-453, MDA-MB-361 and SKOV3~~ cells in a manner that is dependent on the ErbB2 expression level and/or blocks binding of monoclonal antibody 4D5 to ErbB2.
15. (previously presented) The method of claim 14 wherein the antibody binds essentially the same epitope as a 4D5 monoclonal antibody (ATCC CRL 10463).
16. (original) The method of claim 14 wherein the antibody is the monoclonal antibody 4D5 (ATCC CRL 10463).
17. (original) The method of claim 14 wherein the antibody is humanized.
18. (currently amended) The method of claim 17 wherein the antibody is selected from the group consisting of humanized antibodies ~~huMAb4D5-1, huMAb4D5-2, huMAb4D5-3, huMAb4D5-4, huMAb4D5-5, huMAb4D5-6, huMAb4D5-7 and huMAb4D5-8.~~
19. (previously presented) The method of claim 18 wherein the antibody is humanized antibody huMAb4D5-8.

20. (previously presented) The method of claim 55 wherein the antibody is an antibody fragment.

21. (original) The method of claim 20 wherein the antibody fragment is selected from the group consisting of a Fab, Fab', F(ab')<sub>2</sub>, F<sub>v</sub> fragment, diabody, linear antibody, and single-chain antibody molecule.

22-23. (canceled)

24. (previously presented) The method of claim 55 wherein the maytansinoid is a maytansinol ester.

25. (original) The method of claim 24 wherein the maytansinoid is a C-3 ester of maytansinol.

26. (previously presented) The method of claim 25 wherein the maytansinoid is DM1 having the structure

wherein R is SH.

27. (previously presented) The method of claim 55 wherein the antibody and maytansinoid are conjugated by a bispecific chemical linker.

28. (previously presented) The method of claim 27 wherein said chemical linker is N-succinimidyl-4(2-pyridylthio)propanoate (SPDP), succinimidyl-4-(N-maleimidomethyl) cyclohexane-1-carboxylate (SMCC) or N-succinimidyl-4-(2-pyridylthio)pentanoate (SPP).

29. (previously presented) The method of claim 55 wherein the antibody and maytansinoid are conjugated by a linking group selected from the group consisting of a disulfide, thioether, acid labile, photolabile, peptidase labile, and esterase labile group.

30. (original) The method of claim 29 wherein the linking group is a disulfide or a thioether group.

31. (previously presented) The method of claim 30 wherein the linking group comprises a disulfide group.

32. (previously presented) The method of claim 55 wherein the conjugate comprises 1 to about 10 maytansinoid molecules per antibody molecule.

33. (original) The method of claim 32 wherein the conjugate comprises from about 3 to about 5 maytansinoid molecules per antibody molecule.

34. (previously presented) The method of claim 55 further comprising the administration of a second antibody which binds ErbB2.

35. (original) The method of claim 34 wherein the second antibody comprises monoclonal antibody 2C4 or humanized 2C4.

36. (previously presented) The method of claim 34 wherein the second antibody is humanized antibody, huMAb4D5-8.

37. (previously presented) The method of claim 55 wherein treatment with the conjugate is followed by treatment with an unconjugated anti-ErbB antibody.

38. (original) The method of claim 32 wherein the conjugate is administered weekly at a dose of 0.1 to 10 mg/kg body weight.

39. (original) The method of claim 38 wherein said administration is followed by a dose of 0.3 mg/kg body weight approximately 10 weeks later.

40. (original) The method of claim 33 wherein the conjugate is administered weekly at a dose of 1 to 3 mg/kg body weight.

41. (original) The method of claim 40 wherein said administration is followed by a dose of 0.3 mg/kg body weight approximately 10 weeks later.

42. (previously presented) The method of claim 55 wherein the conjugate is administered weekly at a dose of 0.1 to 5 mg/kg body weight for 4 to 6 weeks, followed by maintenance treatment with unconjugated anti-ErbB2 antibody.

43. (previously presented) The method of claim 42 wherein the unconjugated antibody is humanized antibody huMAb4D5-8 or humanized 2C4.

44. (original) The method of claim 34 wherein said second antibody is conjugated with a cytotoxic agent.

45. (original) The method of claim 44 wherein the cytotoxic agent is a maytansinoid.

46. (previously presented) The method of claim 55 wherein said treatment has an improved objective response rate compared to treatment with huMAb4D5-8 alone.

47. (previously presented) The method of claim 55 wherein said treatment has a longer duration of response than treatment with huMAb4D5-8 alone.

48. (previously presented) The method of claim 55 wherein said treatment results in increased survival of the mammal treated compared with treatment with huMAb4D5-8 alone.

49-54. (canceled)

55. (currently amended) A method for the treatment of a tumor in a mammal, comprising the step steps of (i) identifying said tumor as being characterized by overexpression of an ErbB2 receptor and as being a tumor that does not respond, or responds poorly, to treatment with an anti-ErbB2 antibody which binds to the 4D5 epitope and which has a growth inhibitory effect on SK-BR-3 cells, and (ii) administering to a mammal having a said tumor ~~characterized by the overexpression of an ErbB2 receptor, said tumor having been determined to not respond, or to respond poorly, to treatment with an anti-ErbB2 antibody which binds to the 4D5 epitope,~~ a therapeutically effective amount of a conjugate of an anti-ErbB2 antibody which binds to the 4D5 epitope with a maytansinoid.
